

Spectrum

Walking orthoses for the lower extremities make up the largest segment of our product portfolio. 74% of our shipments for knee and ankle joints (KAFO/AFO) are intended for conditions that affect both legs.

74 % Orthoses for both legs

26 % Orthosis for one leg or mixed types

Focused Understanding

Orthosis wearers utilize a diverse range of walking orthoses to address a wide variety of conditions, too numerous to detail comprehensively. To convey the principles involved in standing, step initiation, various gaits, and alignment of AFOs and KAFOs, we have focused our knowledge sections on patients with both legs equally affected – the largest group. Nevertheless, it is important to note these same principles are equally vital for individuals with only one affected leg, ensuring they receive competent treatment that also considers the healthier side.
